

Sex and stature prediction from partial femurs using statistical shape modelling

Takudzwa Togarepi, Julian Bopp

April 19, 2023

Abstract

Describe the project in a few sentences. The reader should get an idea of what the project is all about and what you achieved in the project.

1 Introduction

Introduce the problem statements and the motivation behind the project. Explain (on a high level) how you are approaching the problem.

2 Methods

In this section you can describe the methods you used to solve the problem.

3 Experiments and results

3.1 Data and experimental setup

Explain the data with which you are experimenting. Highlight aspects of the data that are particularly interesting for the project.

3.2 Experimental results

4 Conclusion

Add your conclusion here. What is the main result? What did you achieve, what needs to be done.
